- In the domestic cement business, despite the completion of the 5,000-yen price hike, business structure improvement, and measures to expand the use of low-cost thermal energy, the business continues to face difficult conditions, including lower sales volume due to declining domestic demand and higher costs due to the weak yen. The company aims to achieve profitability in FY2023 by further improving profitability.
- The environment and energy business and domestic group companies are performing well.
- In the U.S. business, ready-mixed concrete sales volume in FY2023 2Q increased due to the resumption of construction work that had been delayed by bad weather in FY2022, and price hikes penetrated early, resulting in a significant increase in profit. In the second half of FY2023, although profit will be decreased compared to the first half due to lower ready-mixed concrete sales and higher costs, profit is expected to increase year-on-year thanks to the effects of price hikes. As a result, a large increase in profits is expected for the full year as well.
